

Adding images to an existing question

Sometimes we forget or want to add images later, to our questions or answers. This will show how to add those images. With the new image editor that ifixit uses, I thought it is about time for me to update my previous guide.

Possible to replace 6s with 6 screen just for screen itself?

Friend wants a screen replacement on her moms 6s but not 6s screens since it has force touch. SO is it possible for me to replace the 6s? or are components different/would not register because of different screens?

Answer this question

I have this problem too

Is this a good question?

YES

NO

INTRODUCTION

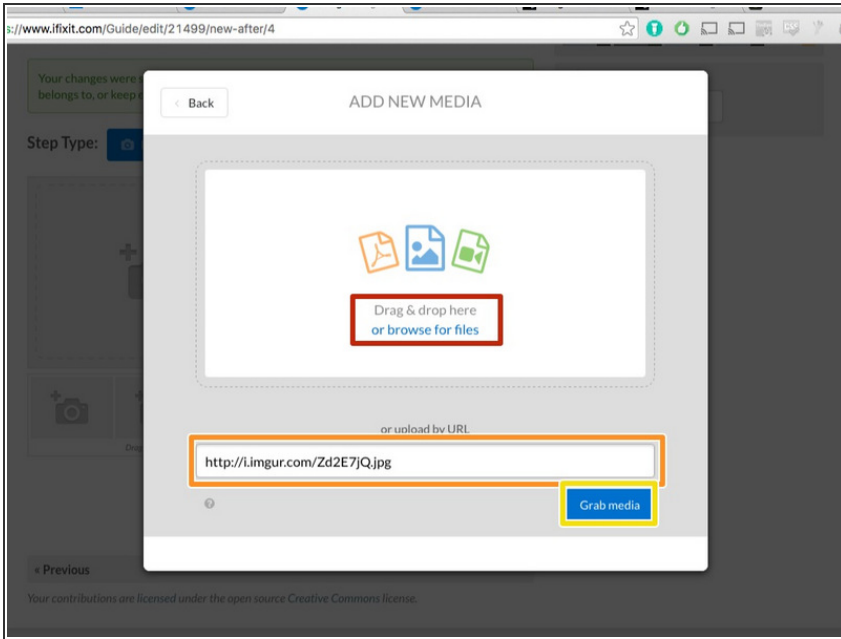

This is a "quick and dirty" guide on how to add images to existing questions or answers.

Step 1 — Adding images to an existing question

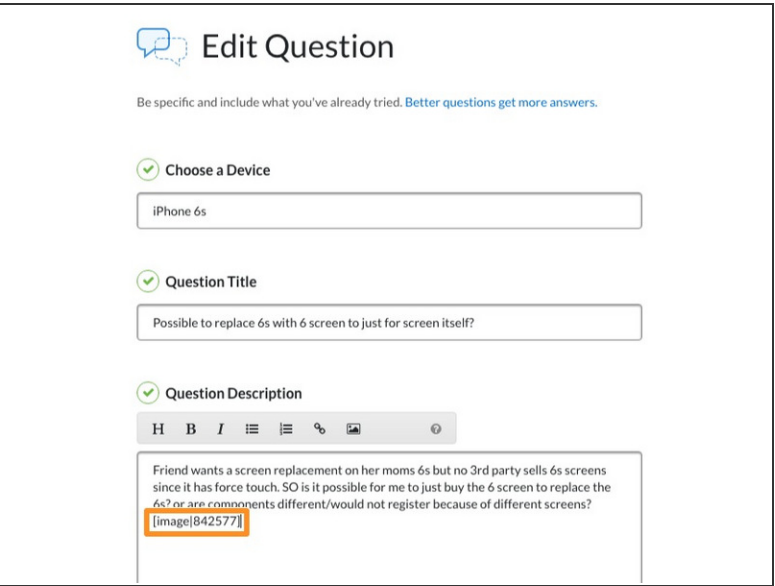

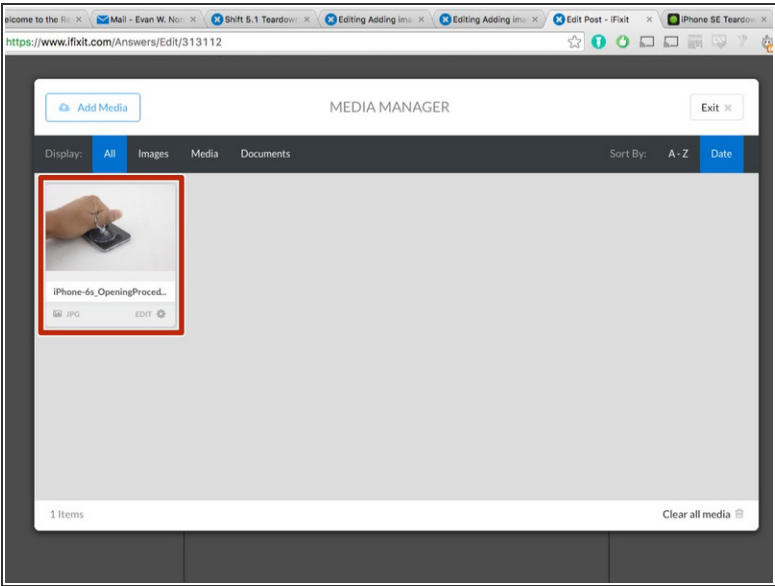

- Mouse-over **Options** on the top right corner of the Question field to reveal a dropdown menu.
- Click on **Edit** to open the Edit Post page.
- Before adding your image, position the cursor at the place in your text where you want to add the image. We suggest placing it at the end of the question.
- Click on the image icon to open the Media Manager.
- Click on **Add Media** and select files from your computer to upload.
- **i** Alternatively, you can simply drag and drop images into the Media Manager to upload them. **If you did this, proceed directly to step 3.**

Step 2

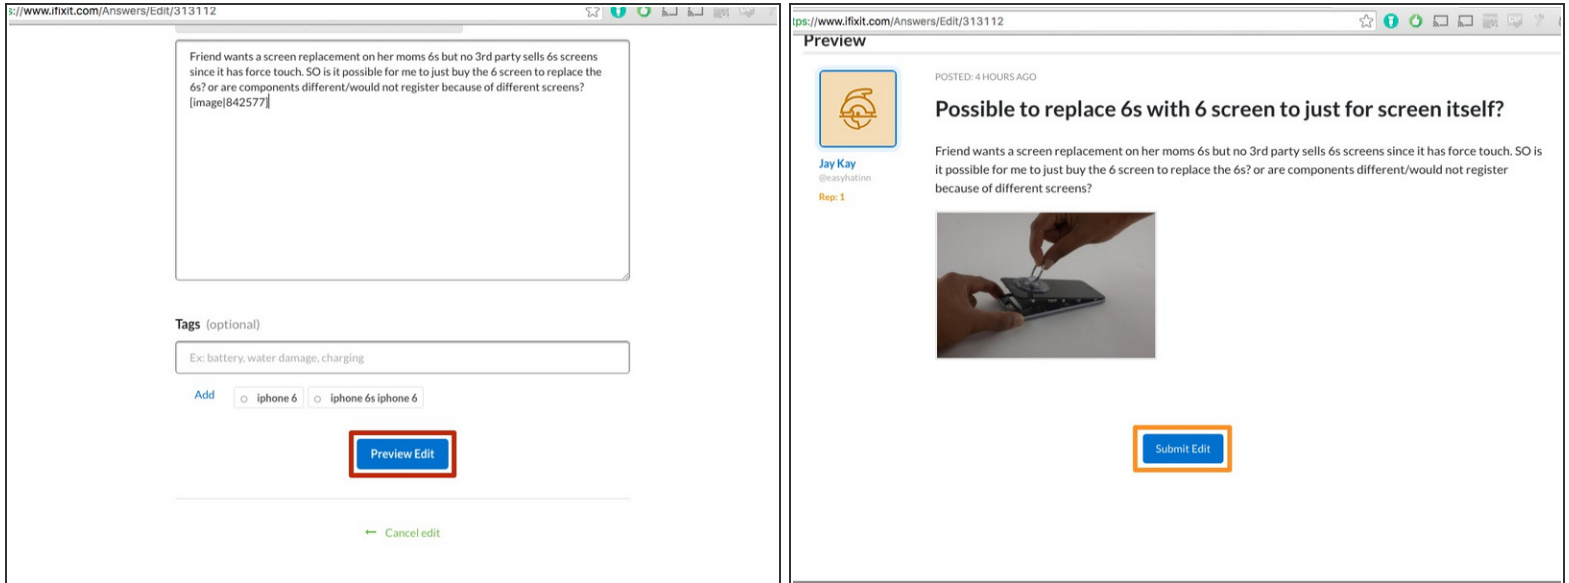

- In the Add Media window, you can add images from the internet or your local machine.
- To add images from your computer:
 - Click on the **browse for files** to find photos on your computer, or simply drag and drop them onto the window.
- To add images from the internet:
 - Get the link to your desired image. You can usually do this by right-clicking the image and selecting **Copy link address**.
 - Paste the link into the field provided.
 - Click **Grab Media** to add the image to your Media Manager.

Step 3

- Once the image is in your Media Manager, click on it to insert into your question.
- The image should appear in-line at the spot where your cursor was positioned when you opened the Media Manager.

Step 4

- After inserting the image, scroll to the bottom of the page and click **Preview Edit**.
- A preview will be automatically inserted below the fields for you to review.
- If everything looks good, click **Submit Edit**. If not, scroll back up and adjust your question as necessary.

The image size for insertion must be 800 x 600 pixels otherwise there will be an error message in the Media Manager. It looks complicated, but is actually straightforward.
